

Investigator Initiated Research studies (IIRs) are both clinical and nonclinical studies that are designed and managed by an investigator. CorMedix is not the sponsor of IIRs and the investigator assumes responsibility for the duration of their study, managing and conducting the research. We welcome well-written, scientifically sound studies to achieve a multitude of goals, such as improving patient care or sparking new ideas for disease-related research.

The following information is required for concept submission:

- Primary Investigator Contact Information
- Study Type: Clinical, Pre-Clinical, or other
- Grant Request: Funding, Drug, or Both
- Research Setting: Single-site or Multi-site
- Site Information
- Study Title
- Brief Study Rationale/Objective
- Brief Study Synopsis
- Timeframe for Completion
- Total Funding Requested with budgetary breakdown
- Planned Publication(s)

Please submit the information requested to iir@cormedix.com. We will contact you with more information once your concept has been formally reviewed by the Investigator Initiated Research Grant Committee. Upon concept approval, you will be required to submit a full study proposal for review.
